Clinic in Tirana

Dental Veneers are commonly used for a cosmetic dental solution and to help you achieve the look you want. Veneers are very popular choices for chipped teeth, space between teeth or malformed teeth. Dental veneers are 3-7 mm covers that are attached to the teeth to give the teeth a more aesthetic appearance. They might be of Zirconia material (crown or veneer) or from E-max material.

Treatments for **Total Dental Rehabilitation** can include overlays, crowns, bridges, dental implants and/or dentures that will essentially provide not only a "smile makeover" but also improved chewing efficiency for the patient. In some patients, other orthodontic specialties may be used to facilitate the best possible result.

Clinic in Tirana

Dental Implant Surgery is a procedure that replaces tooth roots with metal, via screws, replacing damaged or missing teeth with artificial teeth that look and function just like real teeth. Dental Implant can provide a welcome alternative to ill-fitting dentures or bridges and can provide an option when the lack of natural tooth roots does not allow the construction of dentures or the replacement of teeth with a bridge.
